

METAL THEFT ZONES

HOW WE CAN HELP YOU

ROOF ZONE

- E-Bound roof alarm

- E-Bound Roofwatch CCTV

- Forensic Marking*

*Products like SmartWater™ and Selecta DNA™ can be applied. E-Bound can apply these if they are supplied by the customer

ZONE 3

GROUND TO ROOF SECTION

- CCTV

- Passive Infrared Lighting

- Perimeter Alarms

- Door Entry and Internal Alarms

ZONE 2

GROUND AREA

- E-Bound free printable info pack

- Advice and guidance for parishioners and the public

ZONE 1

Ideal zones for our security solutions

Secured by Design

E-BOUND
TECHNOLOGIES

Official Police Security Initiative

ZONE 3**ROOF LEVEL**

A security strategy is developed by evaluating the assets, considering the threats against them and developing countermeasures to reduce their vulnerabilities. Countermeasures will consist of an integrated series of physical and procedural improvements, backed up with electronic security, to provide an appropriate level of protection. Vulnerabilities are reduced by layering security, both physical and electronic thereby creating defence in depth. This approach to security is designed to deter a crime in the first instance, to delay access to target assets and to detect an attack at an early stage, should one occur. Thus potential criminals, having inspected the property, may be deterred from undertaking a burglary by the sight of robust physical security, intrusion sensing and external lighting. Should they decide to proceed, physical measures will delay access to target assets and the alarm system will provide an early indication of attack and summon an effective response.

**ZONE 2****GROUND TO ROOF LEVEL**

The focus of this zone is to make it as difficult as possible for would-be thieves to reach the valuable metal. The challenge being to balance making it obvious to the criminal that security measures are in place, with the need to make the building as attractive and accessible as possible to genuine visitors. The first measure is to make sure that anything which criminals could use to climb up into or onto the building is moved away. Wheeled bins in particular should be locked in a shed or securely chained to railings away from the building. These can be used by criminals as not just a 'leg up', they are also used as wheelbarrows to transport ill-gotten gains off site. Special precautions need to be taken if there is scaffolding in place for building works. You **MUST** advise your insurer if this is the case and follow their advice. Planting spiky shrubs or bushes can act as a deterrent to unauthorised access, but their siting needs to be chosen carefully in order to avoid reducing accessibility for maintenance work and for genuine building users. Please refer to our planting advice sheet within this pack.

ZONE 1**GROUND LEVEL**

The key to this zone is engagement with as many people as possible. Encouraging congregation members and local residents to watch out for suspicious activity, particularly in the evening and at night and report any such behaviour to the police. Maintenance contractors do not generally attend at night. Create local networks, linking with other churches and near-by public buildings to share expertise and intelligence. If your church has gates, make sure they are closed and locked at night and make sure it is impossible to bring vehicles close to the building. A poster for self printing and laminating is included in this pack.
