

The new bi-monthly newsletter arrives!

The **E-Bound** Voice

Mar/Apr **2018**

This month in The Voice...

The new E-Bound website is here.

It's always nice to come across a helpful, responsive and good looking website, we appreciate that and that's why we're looking to get a new website up and running so existing and new customers have all the information in front of them, in one place.

How to protect your church, inside and out.

We show you that E-Bound isn't all about roof alarms, we have other services to protect and conserve your church.

And...Being greener at E-Bound

New E-Bound website is here now.

Here at E-Bound, we want to bring a higher quality to our web presence, so we're working on a new and fresh website to bring new customers more information about E-Bound and the other services we provide.

We also think it important to be welcoming on the internet to find better ways to communicate with existing and potential customers as we develop the website and the company, going forward.

This newsletter will accompany the website and be uploaded there every two months to supply news and updates that may not show on the website. Our goal is to be more affiliated with our customers and to help bring a more personalised and friendly service.

We aim to make the website compatible with all phones and tablets to make access that much easier.

We can protect your church, inside and out.

Uncommon knowledge is that E-Bound don't just protect roofs, we have multiple services that potentially protect all corners of your church, inside and outside including; Internal Alarms, CCTV, Vestry Cams, Scaffold Alarms and more.

We take the security and conservation of our churches seriously and have the means to do so.

Should you have any need for or interest in our other services, please call our office **01733 843341** or out of hours **0844 493 6075**

Your Responsibilities as a Keyholder

- Have at least 2 contacts available **24/7**
- Each contact should reside **within 20 minutes** of the church
- Take keys to the property if needed
- Save the **Custodian** number **0844 970 1703/1719**
- If you need to contact us **01733 843341** or out of hours **0844 493 6075**
- For disaster recovery purposes **Custodian** use non-geographic numbers for passing alarm calls and numbers **must not** be placed on restriction with your telephone service

When you arrive at the church:

- **Do not** put yourself at risk
- **Do not** enter the church unless you are certain that it is safe to do so, if the emergency services have attended, follow any instructions given

How E-Bound is becoming greener.

Our approach.

E-Bound takes the health of our planet seriously. We have examined every aspect of our business to ensure we waste as little as possible and get as much as we can from the energy we consume. We also take responsibility for disposing of the materials we use when they come to the end of their lives. We take back and recycle old alarm systems, we recycle batteries and plastics and we are working hard to ensure more of what we manufacture will be recycled in future.

Climate change is an urgent issue and we have worked hard to reduce our energy usage and cut CO2 emissions. We have purchased small, fuel efficient vans and have even gone one step further. We now have five petrol vehicles converted to LPG and purchased two Hybrid vehicles to replace diesel vans. A comprehensive new vehicle emissions study has demonstrated that LPG delivers significant all-round environmental benefits and in terms of pollutants it is cleaner than petrol and diesel.

Hannah Goodley, Operations Director at E-Bound said "We have to visit each church customer, at installation and then annually for the servicing and maintenance.

This means a lot of driving. Our LPG and Hybrid vehicles have the potential to make a huge difference to local air quality, particularly in urban areas where poor air quality is directly attributed to Petrol or Diesel engines."

E-Bound AVX Ltd

Spray-on Protection for your church.

Criminals target isolated sites and hard-to-protect buildings looking for easily sold items such as, lead, copper and other valuable metals.

SelectaDNA marks and identifies these metals and other outdoor materials to help protect you against theft and burglary.

Each kit consists of an easy to deploy 150ml aerosol containing unique forensic signature and uses warning signs to alert criminals that your property is protected.

SelectaDNA trace marks up to 150 pieces of valuable metal with a unique lacquer that is inconspicuous and virtually impossible to remove. Apply the formula to concealed areas of the roof, lighting conductors, drain pipes etc. and prominently display the warning signs. You register your kit and marked items on our Police and insurance approved Secure Asset Register so that if the worst happens and you do suffer from theft, Police can identify those marked items as belonging to your church and secure convictions.

The system is a huge deterrent, as the one thing criminals fear most is...DNA evidence.
